Celaya, Guanajuato, Mexico

EDUCATION

B.S. in Networking and Telecommunications Engineering
Universidad Politécnica de Juventino Rosas
Graduation: 2017 – 2021
Juventino Rosas, Guanajuato, Mexico

BACKEND & CLOUD

- Java (Java 21, Spring Boot, Quarkus)
- Microservices & RESTful APIs (JSON)
- Docker & Kubernetes (K8s)
- AWS Cloud (CloudWatch, Aurora, ECS)

BIG DATA & DATABASES

- Apache Kafka & Apache Flink
- Apache NiFi & Apache Druid
- PostgreSQL (Aurora), SQL Server, MySQL
- Python & Shell Scripting (Linux)

METHODOLOGIES & DEVOPS

- Git & GitLab CI/CD
- Agile Methodologies (SCRUM)
- Technical Leadership & On-Call Management
- OpenAPI / Swagger Documentation

LANGUAGES

- English (Advanced B2)
- Spanish (Native)

PROFESSIONAL SUMMARY

Software Developer with extensive experience in backend engineering and Big Data support with Java, specializing in distributed systems, microservices, and cloud automation. Proven expertise in technologies such as Java, Quarkus, Spring, Flink, Kafka, Docker, Kubernetes, and AWS. Demonstrated track record in the financial and telecommunications sectors developing real-time data ingestion and analytics platforms. Skilled in technical documentation, team leadership, and Agile methodologies (SCRUM).

WORK EXPERIENCE

Backend Developer

Almacenadora Banorte (NTT DATA) *Sep 2025 – Present | Celaya, Mexico*

Engineering and delivery of financial microservices using Java 21 and Quarkus under clean layered architecture on SQL Server. Focused on core services: ms-recibos-deposito, ms-servicios-adicionales, ms-prospectos, ms-expediente-mc, and ms-personas-facultadas.

- **Core Microservices & Domain Logic:** Transactional logic for automated fee calculations, storage tariffs, ancillary services, VAT, prospect lifecycles, credit files, and legal signatory powers.
- **Reporting & Performance:** Pipeline for high-fidelity deposit receipts and official PDF documents with OpenPDF, optimizing response times via native SQL queries and database pagination.
- **Quality & Maintenance:** REST API specifications (OpenAPI/Swagger), Playwright E2E tests for Angular (Nx) portal, and targeted bug fixes / feature enhancements across secondary modules.

Java Developer & Support Developer

Altán Redes & Telefónica Movistar (NTT DATA) *Jun 2021 – Aug 2025 | Celaya, Mexico*

Application support and evolutionary development for mission-critical telecommunications platforms (Altán Redes and Telefónica Movistar). Within the support framework, actively developed containerized microservices and streaming pipelines on AWS (ECS, Aurora, CloudWatch) and distributed platforms (Kafka, NiFi, Flink) for Altán Redes.

- **Development within Support (Altán Redes):** Engineered Java microservices and real-time streaming architectures, feeding continuous data streams into DruidSQL, PostgreSQL, and Superset.
- **Production Support & Automation:** Handled production incident triage and maintenance across both accounts; built Python and Linux Shell scripts reducing manual operational interventions by >60%.
- **24/7 On-Call & SLAs:** Monitored systems via AWS CloudWatch under rotational on-call coverage, ensuring network backbone continuity and adherence to strict SLAs.

CERTIFICATIONS & CREDENTIALS

Centers Developer (NTT DATA - ID: 202182)
Accounts: Almacenadora Banorte, Altan Redes, Telefónica Movistar Big Data
